Mentoring Past Imposter Syndrome to Expand the HPC Workforce

Wednesday, 30 November 2022 12:15 (30 minutes)

The HPC field is growing far faster than we can adequately train the most qualified candidates. To better address these workforce needs, mentoring people that have potential, but do not believe they can achieve in or even belong in HPC can help both address the workforce needs as well as enhance and expand representation. This talk focuses on developing students and even early career people into successful, confident HPC community members.
