Building global federated infrastructure in the R&E community

Tuesday, 3 December 2024 09:00 (45 minutes)

Trust is the basis for any human and technical interaction. Research collaborations have been sharing resources and data for decades; however the open science wave is pushing to make scientific research and its underlying data more accessible to all levels of society,

This talk explores how trust is established in research collaborations and infrastructures and how Authentication and Authorisation Infrastructures (AAIs) allow authorised users to access shared resources. Examples of these AAIs, along with lessons learned are provided for the European Open Science Cloud (EOSC) and EuroHPC.
