NVIDIA Accelerated Computing (NVIDIA)

Monday, 2 December 2024 14:30 (20 minutes)

NVIDIA's Accelerated Computing Platform is designed to accelerate various workloads, including AI, HPC, Professional Visualisation & Gaming. The platform provides faster performance, increased productivity, improved accuracy, and cost savings for organizations across industries.

NVIDIA's Accelerated Computing Platform is designed to accelerate various workloads, including:

- Artificial Intelligence (AI): NVIDIA's GPUs and Tensor Cores accelerate AI workloads, such as deep learning, natural language processing and computer vision.
- High Performance Computing (HPC): NVIDIA's GPUs and networking technologies accelerate HPC workloads, such as scientific simulations, data analytics and visualization
- Professional Visualization: NVIDIA's GPUs and Quadro professional visualisation workloads, such as 3D modelling, engineering, and video production
- Gaming: NVIDIA'S GeForce GPU's accelerate gaming workloads, providing fast performance, low latency, and high-quality graphics

NVIDIA's Accelerated Computing Platform:

- NVIDIA GPU Architecture: NVIDIA's GPU Architecture is designed to accelerate compute -intensive workloads
- CUDA: CUDA is NVIDIA's parallel computing platform and programming model and allows developers to harness the power of NVIDIA GPU'S
- NVIDIA Networking: NVIDIA's networking technologies such as NVIDIA Mellanox, provide high-speed networking solutions for accelerated computing workloads
- NVIDIA Software: NVIDIA provides a range of software development kits (SDKs) and tools to support accelerated computing workloads.

Numerous Industries benefit from NVIDIA Accelerated Computing, just to name a few: Healthcare (acceleration of medical imaging, genomics, and drug discovery workloads) Finance (acceleration of financial modelling, risk analysis and trading workloads) Scientific Research: (acceleration of scientific simulations, data analytics and visualization workloads) Gaming and Professional Visualization: (faster performance and high-quality graphics)
