Introduction to Schrödinger's Drug Discovery Tools

Sunday, 2 December 2018 09:00 (1h 30m)

Schrödinger is a leading provider of scientific software in the drug design industry. The workshop will give an overview of the drug discovery tools available from Schrödinger.

Participants will be introduced to our graphical interface, Maestro 11, and get some hands-on experience with common tasks like docking and pharmacophore based virtual screening. We will also cover the newly redesigned enumeration and virtual library design tools available.

The workshop will finish with a lecture on more advanced modeling tools, and an open Q&A session.
