High performance computing of super heavy elements of the periodic table

This talk is intended to International Year of the Periodic Table of Chemical Elements (IYPT 2019) by presenting a talk on small molecules that needs HPC calculations to optimize. However, the molecules are small enough that any person can understand their structure and follow the talk. If this talk is accepted in the main CHPC conference program, it will be presented in a public understandable language.

Supported Student

Primary authors: CONRADIE, Jeanet (University of the Free State); Prof. GHOSH, Abhik (UiT – The Arctic University of Norway)

Presenter: CONRADIE, Jeanet (University of the Free State)

Session Classification: SIG Poster

Track Classification: SIG Seminar: Chemistry, Material Science and Health Science
