

Fritz Ferstl

Altair

Fritz Ferstl is Senior Vice President of Software Development at Altair and manages most of the product engineering of the Altair PBS Works suite, including all of the Altair workload and cloud management products and related add-ons. Fritz came to Altair from Univa, where he was serving as CTO at Univa was driving workload and cloud management products as well as integrations with emerging technologies such as Kubernetes, containers and GPUs. Prior to that, Fritz worked at Sun Microsystems and Oracle in HPC engineering management roles, among other activities being responsible for the open sourcing of Grid Engine and turning it into a vibrant community project. Fritz is regarded “the father of Grid Engine” being the initial engineer working on this product line.
