## The Lost Packet Warehousing Service

*Thursday, 2 December 2021 12:45 (30 minutes)*

The Lost Packet Warehousing Service (LPWS) is a technological solution with a South African focus to enable the passive but continuous collection of cyber data. The purpose of LPWS is to function as the primary source of cyber data, which will support the identification and detection of emerging trends and cyberattacks. LPWS aims to monitor threats at a national, organisation and private level using a collection of deception technologies. Products offered by LPWS include raw data sets, available for use by universities, cyber threat reports, as well as the Honey Net Kit - a miniaturized but deployable prototype of LPWS.
